

NOTE: The combined load of all accessories connected to this voltage reducer must not exceed its MAXIMUM rating of 12 volts—15 amps. It is not necessary to use both 12 volt output connections, but if a connection is not used it MUST BE ADEQUATELY WRAPPED WITH ELECTRICAL TAPE OR OTHER SUITABLE INSULATION MATERIAL TO PREVENT POSSIBILITY OF SHORTING.

WIRING DIAGRAM
For
VOLTAGE REDUCER 16-18V to 12V
P/N 10905

The diagram shown above is for a TYPICAL 16V connection. It may not be the exact same battery configuration as your vehicle, but the premise will be similar.

NOTE: Do NOT MAKE ANY "GROUND" CONNECTIONS TO THE GOLF CAR FRAME!
